## PROJECTS

### Foodie ATL

- *JavaScript, Express, NodeJS, Sequelize, EJS, Bootstrap*
- Foodie ATL is a backend focused application that was created to allow local foodies to search different restaurants in the metro atlanta area. This app not only allows the user to swipe left or right on restaurants in the Atlanta area but lets the user view the menu, popular dishes, hours of operation, ect. by clicking the image. Once the user finds a restaurant they'd like to go to they'd like it and the restaurant gets added to their favorites list.

### Weather App

- *JavaScript, CSS3, AJAX, HTML5, SCRUM Master*
- A weather app using the Open Weather Map API to pull in weather data based on the city typed in and added some background effects based on the weather

### Cocktails & Quotes

- *JavaScript, CSS3, AJAX, HTML5, SCRUM Master*
- Designed a responsive site using the Cocktail DB API and Ron Swanson Quotes API. The app, based on the user's search, outputs drink names, pictures and drink ingredients and also generates a random quote once the quote card is clicked.

### To-Do List

- *JavaScript, CSS3, HTML5, Local Storage, Solo Project*
- Built a todo list app that lets the user type in all their tasks and saves them using local storage until they complete the task, then they can either delete it or strike through it.

## EXPERIENCE

### **UL LLC - Marietta, GA** *Environmental Chemist*

MAY 2018 - Present

- Analysis of spectral data from GC-MS samples
- Helped increase productivity by 20% by creating a shared spreadsheet system that allows employees to sign up for assignments when done with their daily tasks
- Troubleshooting instrumentation, including collaborating with outside vendors for non-routine maintenance and repair
- Training associates and contract employees in routine analysis
- Interviewed and effectively participated in the hiring process of employees
